

PresSTORE Archive is the clear & easy solution for long-term storage. It offers extendable metadata fields and Quicktime previews for effective search and retrieval.

Maximum automation. Easy administration.

PresSTORE Archive can monitor files, folders and the directory structure to archive files automatically. Fine-grained filtering may be applied to select or exclude files based on name, size, date etc. Within minutes an archive can be configured and running. The browser-based interface enables fast and easy configuration, administration and monitoring – independent of your location. With an excellent price/performance ratio, this results in a considerable relief on your work and resources.

Security and reliability

Unparalleled security

PresSTORE Archive provides maximum data security. Data can be cloned to a second tape for offsite storage. Encryption options protect data against non authorized access both during the transfer and on the media itself.

■ More security
■ Easy search

■ Free storage
■ Full flexibility

Data migration

PresSTORE Archive helps to move data to cost effective tape media. In the process, expensive server storage can be reclaimed while backup times are reduced. Quality of service and productivity increase for users and administrators.

By relieving your network of traffic and your stage of files, you get a better working experience and increased productivity.

Comfort for admins and end user

Simple, user-friendly search: Quick access to your files PresSTORE Archive offers extensible meta data fields. Quicktime previews of files like PDF, images and video simplify browse and search.

Search & Restore for users

PresSTORE Archive provides configurable login areas for restricted or direct access to (selected) parts of the archive to browse, search and restore files.

Full flexibility

Platform independence

You can restore data on any platform since PresSTORE stores it in a platform neutral format.

Scalable & modular design:

Growing with your requirements

PresSTORE's modular design allows optimal adaptation to growing requirements. There are no limits on possible growth. You can add further PresSTORE products, hardware, media etc. smoothly.

PresSTORE 4

Operating system requirements	Hardware requirements
Mac OS X	Memory
PPC OSX 10.4+, Intel 10.4+	1 GB+
Windows*	Hard disk
2003, 2008, XP, Vista, Windows 7	200 MB for Installation + variable (for backup/archive indexes)
Linux*	
Kernel 2.6.4+ (x86) 32bit or 64bit with 32bit libs	
Sun Solaris	Browser requirements
Sparc Solaris 2.8+, x86 Solaris 2.10+	Safari 4.0+, FireFox 3.5+, Internet Explorer 7+
Platform Bundle	
Mac OS X – Windows – Linux – Sun Solaris	
<i>* Note: Not supported as Backup2Go Server</i>
