

## **LAMINATION STATION**

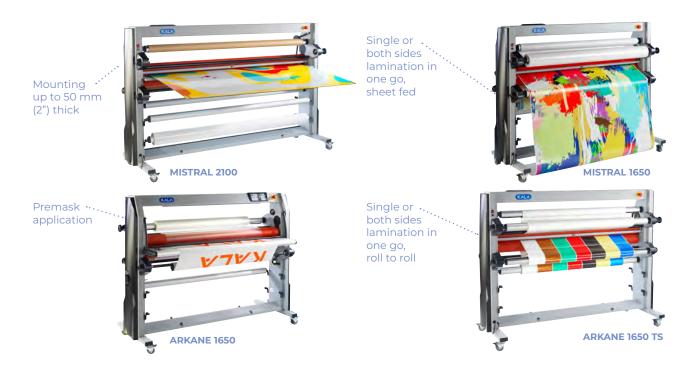

### The paramount choice for wide format finishing

Since their inception in 2008, KALA laminators continue to be recognised as industry leaders in wide format print finishing departments across the world. More than just a laminator, KALA creates the «Lamination Station» enabling operators to increase productivity, reduce waste thus maximising profit in their finishing operation. Our machines Mistral, Arkane and Atlantic use the same platform and operate the same way, with different features in pressure and temperature.

- Waste free Lamination. Very limited waste when loading media and perfect results from start to finish. No need to reprint because of finishing errors
- Unsupervised roll to roll laminating with perfect results
- Exceptionally intuitive control board makes it easy to operate, for both skilled and new operators.
- Patented Auto Calibration System constantly monitors pressure and eliminates skewing.
- Silicon rollers designed to disperse pressure evenly throughout the entire width
- Compact footprint

### Suitable for all your wide format finishing jobs

Technology transforms performance KALA Mistral, Arkane, Atlantic share the same base features.

Our engineers have designed this range based on the innovation described hereby. The result: high performances and easy to use equipment, which turns into an increase of your profitability.

### • EXCLUSIVE: PATENTED AUTO CALIBRATION SYSTEM

The nip of the rollers is constantly monitored and automatically corrected if required even during the laminating process. Pressure level is consistent throughout the width of the media, regardless of the width. A smooth and regular feed of the media for perfect results from start to finish, without changing adjustment during the operation.

#### ROLLERS

No compromise with quality. We select the best steel in the appropriate diameter and thickness. A larger diameter of the roller does not necessarily constitute a better lamination result.

Our steel rollers are coated with our proprietary blend of polymeric materials varying in hardness depending on the laminator selected (thermal conduction, non-sticky surface, higher resistance...).

They are converted following a designated shape carefully studied to ensure that the prints will be processed perfectly, for short and long runs. The combine features of hardness and uniform heat dispersion secure the highest quality level in your finishing operation which other products can't offer, even with larger roller diameter.

#### • THE FRAME

The frame consists of welded steel, to form a one piece chassis that guarantees stability and steadiness. As a consequence, lamination works don't skew.

#### HEATING SYSTEM

Temperature is measured in the centre of the heating roller for an accurate information, notwithstanding the width of the lamination job. Heating is supplied by an infra-red heating element, designed for giving a precise and constant temperature throughout the entire width of the roller.

### Performance beyond expectations

#### ROLL TO ROLL

Best performing first choice laminator amongst wrapping studios and high-volume print shops that process full printed rolls.

Easily loaded, a full roll of printed media up to 100 metres (328 ft.) will be laminated perfectly straight and rewound without any skewing. This process can be carried out unsupervised resulting in free time for the operator to perform other tasks. With the recent introduction of a remote-control option, the operator can control certain functions from a distance optimizing the effectiveness of time.

Maximize productivity

#### ROLL GAP

The gap between the rollers is adjustable up to 50 mm (2"), suitable for a broad range of applications.

Elevation is operated by 2 electrical motors controlled electronically (auto-calibration) and the pressure is even throughout the working width. Pressure is adjusted on the material itself and not with pre-set positions or compressor assistance.

### WORKING SPEED

Speed is adjustable up to 6,5 m/minute (21/minute).

Designed to avoid unanticipated fast starts, the roller gently ramps up to the set speed notably reducing the likelihood of operator handling errors.

In our opinion, higher speed offered by competitive products should not be a major selection criteria, because it would deteriorate the job quality and would not benefit to your organisation.

#### MEDIA REEL DIAMETER

Our laminators will accommodate rolls up to 100 m (328') with a maximum diameter of 9".

## Control and safety

### Every standard feature is designed and integrated to enhance the quality, efficiency and profit performance of your finishing operations.

#### CONTROL PANEL

Intuitive and easy to use, all functions are accessible from the ideally positioned control panel. The panel consists of 4 sections, one for each function hereby listed.

### SAFETY

Safety first

At KALA, we consider operator safety an essential design element and unlike other exotic products, we strictly comply with the latest machinery directives.

- 2. Safety switch on swing out infeed tray stops the rollers from turning when in the upward position
- 3. 2 emergency stop switches easily accessible from the front and back of the machine.
- 4. When any of the safety features are triggered, the reset button on the control panel will flash red. Simply pressing the reset button will reactivate the system.
- 5. An audible beep sound will indicate the reverse mode has been engaged.

#### FOOTSWITCH

When selected, the multi-function footswitch activates stop and go lamination, leaving hands free when feeding wider prints.

When not selected, the multi-function footswitch, will switch off the driving motor without using the control panel.

Useful for mounting application, the footswitch operation when selected, deactivates the safety laser eye.

### Quick and easy loading of the media

#### SELF-BLOCKING AND UNWINDING SHAFTS

Our lightweight and graduated self-blocking roll-shafts save you time when loading media. Contrary to systems using locking rings or pivoting shafts, no tools are required and a much smaller work area is occupied when loading media.

Our roll-shafts can be used in any dispensing or rewinding positions and inserted in either directions. Loading media is easily achieved by one person only.

Unwinding shaft

Built in storage space for up to 4 rolls of media is located in the bottom section of the laminator. Extra roll-shafts are available as an option. Materials are safely stored on a roll-shaft horizontally and easily reachable for quick media changeover.

#### **EASY LOADING OF MEDIA**

KALA laminators are designed to enable quick media changes with minimal waste of material. A powder coated metal feeding plate that minimizes wastage is included with the machine and stored in its designated place on the laminator.

The in-feed tray pivots upwards allowing full and secure access for easy unobstructed loading of the media. When placed in the upward position, the driving motor will not operate, securing the operator from any injury during the loading operation.

#### IN-FEED TRAY

Feeding prints made easy thanks to the removable media guide.

Squaring guide for processing rigid panels in series.

Thick feeding tray with bullnose edge to prevent prints from being damaged while feeding.

## Ergonomics

#### OUTPUT TRAY

An aluminium output tray maintains and guides the media. The output tray is not required when performing roll-to-roll and it is easily removed and stored in its designated location at the base of the machine.

A safety cutter is included to avoid damage to the rollers. The magnet on the safety cutter makes it easily accessible allowing it to be placed on any part of the steel frame.

### LIMITED FLOOR SPACE AND EASY ACCESS TO ALL ADJUSTMENT

The machine occupies a limited space, leaving free access and allowing effortless media changes.

All adjustments are easily reachable and all film tension adjustments remain unchanged from one roll to another.

### IN LINE SLITTING (OPTIONAL)

#### In line slitting system

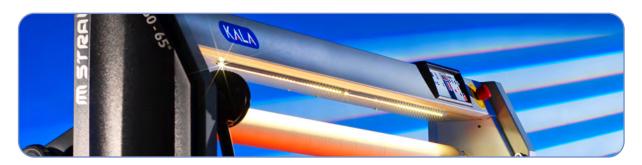

Delivered with two cutting heads. The heads can be locked in various positions:

- · cuts laminated prints as they exit the main rollers
- · cuts lamination film before entering the main rollers. Ideal for applications where the laminating film is wider than the print.

This optional slitting device is available for Mistral, Arkane in 1650 mm (65") and 2100 mm (83") and for Atlantic 1650 mm (65")

## Options

#### **LED light kit**

Ideal for lighting up the in-feed tray just prior to inserting the print and for one final inspection before feeding it through the

Ref. MP 601820 Pour laize 1650 mm - 65" Ref. MP 621820 Pour laize 2100 mm - 83"

#### Self-blocking shaft

Graduated media shafts. Usable from the storage position and compatible with our complete range of flat-bed AppliKators and KalaXY trimmers.

Ref. AX165076 Pour laize 1650 mm - 65" Ref. AX210076 Pour laize 2100 mm - 83"

### Antistatic string with magnets

Perfect to unload static generated by lamination and print media, in particular those with a polyester liner backing.

Ref. MP 601840 Pour laize 1650 mm - 65" Ref. MP 621840 Pour laize 2100 mm - 83"

#### Remote control

The remote control allows the operator to set drive function from a distance.

Retrofitable on site, we recommend contacting an authorized KALA dealer prior to purchasing to verify if any electronic modifications are required.

Ref. REMOTE

#### Gas lift

For a soft closure of the in-feed tray when in upper position. This feature offers additional safety for high traffic work areas.

#### **STANDARDS**

All products in this range are made in France and CE certified in compliance with the latest machine directives for:

- $\cdot$  Electromagnetic compatibility
- · Electrical safety
- · User safety

Testing to obtain this certification have been performed by recognized laboratories (Apave, Emitech) with a strict obe-

dience to the official directives. This differs from certification of exotic products, which may simply consist in an auto-certification by its manufacturer. Tests results of KALA machines are available upon demand.

#### **SERVICE**

KALA laminators are designed and built to last. You will acquire this machine with a vision to cope with your development and growth plans for a number of years. A KALA machine is an investment and not a consumable.

Most of our machines delivered 10 years ago are still working today.

We keep tracking of all parts for each serial number produced on our premises. We engage in keeping the wearing parts in our inventory **for 10 years** after the production termination date.

## STATE OF THE ART LAMINATION STATION FOR ECO-SOLVENT, LATEX, OFFSET AND SCREEN PRINTS

- Working width 165 cm (65")
- Nip roller opening up to 50 mm (2")
- $\longrightarrow$  Top heated roller from 30 to 60 °C 86 to 140 °F
- Lamination speed up to 6,5 m/minute (21 ft/mn)
- Manual feeding of the print or roll to roll operation
- Adjustable pressure level corresponding to the media processed
- Kala's patented auto-calibration system constantly monitors the pressure and parallelism of the rollers
- —● Single side lamination, encapsulation in one pass, pre-mask, mounting up to 5 cm 2" thick

## **MISTRAL 1650**

### AVAILABLE OPTIONS

Gas lift to slow down the descent of the feeding tray

### In line slitting

Cuts laminated prints as they exit the roller or the film before lamination

### **LED lighting**

Ideal for lighting up your lamination working space

### Anti-static string with magnets

Perfect to unload static generated by lamination and print media

### Remote control

Allows the operator to set drive function from a distance

#### Shaft

Graduated media shafts.

<u>General</u> <u>Documentation</u>

### MISTRAL 1650 - DUAL FEEDING

## IDEAL FOR WORKSHOP WITH HIGH PRODUCTION AND WILLING TO IMPROVE PRODUCTIVITY FINISHING

- Compatible with all kinds of print and media, and best results with eco solvent, latex, offset, screen printing prints
- → Working width 165 cm (65")
- Ideal for large production or frequent changes of media. Save time and operator efforts in film loading operations with media already set on the machine & ready for a quick media installation on the laminator
- → Top heated roller from 30 to 60 °C 86 to 140 °F
- Nip roller opening up to 50 mm (2")
- Lamination speed up to 6,5 m/minute (21 ft/mn)
- Adjustable pressure level corresponding to the media processed
- Kala's patented auto-calibration system constantly monitors the pressure and parallelism of the rollers
- Single side lamination, encapsulation with pressure sensitive adhesive in one pass, pre-mask, mounting up to 5 cm 2" thick.

## **MISTRAL 2100**

For wide format and large board requirements

### A PERFECT COMPLEMENT TO FLAT BED PRINTERS

- Incredible sealing results with all kinds of print and media, particularly UV prints, even with the largest ink drops and the most irregular surfaces.
- Working width 210 cm (83")
- Extra width offers more comfort for large board lamination and therefore less possible damage during handling.
- Top heated roller from 30 to 60 °C 86 to 140 °F
- Nip roller opening up to 50 mm (2")
- Lamination speed up to 6,5 m/minute (21 ft/mn)
- Adjustable pressure level corresponding to the media processed
- Single side lamination, encapsulation with pressure sensitive adhesive in one pass, pre-mask, mounting up to 5 cm – 2" thick
- Kala's patented auto-calibration system constantly monitors the pressure and parallelism of the rollers

Maximum film width	165 cm (65")	
Usable length of lamination media	50 / 100 m (max. diam. 23 cm – 9")	
Diameter of the roller	119 mm (4,7") max.	
Temperature of the heating roller	30 to 100 °C in steps of 5° (86 to 212 °F in steps of 9 °F)	
Heating time from room temperature to 40 °C (86 °F)	7 minutes	
Shafts delivered with the machine	5 shafts + 1 scrolling bar	
Adjustable speed	0,3 to 6,5 m/mn – 0,9 to 21 ft/mn	
Power W – Voltage – Amps	1800 W – 230 or 110 V / 50-60 Hz – 8A/230 V or 16 A/110V	
Dimensions of the machine (cm)	L 206 x P 82 x H 153 cm (L 81" x P 32" x H 60")	
Net weight of the machine	210 kg (462 lb)	
Shipping dimensions (cm)	L 215 x P 95 x H 170 cm (L 85" x P 38" x H 67")	
Shipping weight	310 kg (683 lb)	
Warranty	2 years	
Made in France, CE certified, based on European Machines Directives and electromagnetic compatibility CEM & FCC

Completely versatile

### ALL LAMINATION SOLUTIONS IN ONE MACHINE

- Incredible sealing results with all kinds of print and media, particularly UV prints, even with the largest ink drops and the most irregular surfaces
- → Working width 165 cm (65")
- → Heated rollers from 30 to 140 °C 86 to 284 °F
- Nip roller opening up to 50 mm (2")
- Lamination speed up to 6,5 m/minute (21 ft/mn)
- Adjustable pressure level corresponding to the media processed
- Single side lamination, encapsulation with pressure sensitive adhesive in one pass, pre-mask, mounting up to 5 cm – 2" thick, use of polyester thermal film for encapsulation
- Kala's patented auto-calibration system constantly monitors the pressure and parallelism of the rollers

Use of thermal film, on the take up

Use of pressure sensitive film on any type of prints

### → INCLUDED

Gas lift to slow down the descent of the feeding tray

### AVAILABLE OPTIONS

**LED lighting**Ideal for lighting up your

lamination working space

Remote control
Allows the operator to
set drive function from
a distance

#### In line slitting

Cuts laminated prints as they exit the roller or the film before lamination

### **Shaft** Graduated media shafts. Usable from the storage position

**Anti-static string** 

Perfect to unload static

generated by lamina-

tion and print media

with magnets

### **→ TECHNICAL DATA**

Maximum thickness media + board	50 mm (2")
Maximum working width	171 cm (67")
Maximum film width	165 cm (65")
Usable length of lamination media	50 / 100 m (diam. max. 23 cm/9")
Diameter of the roller	119 mm (4,7") max.
Temperature of the heating roller	30 to 140 °C in steps of 1° (86 to 284 °F in steps of 2 °F)
Heating time from room temperature to 100 °C - 212 °F	20 minutes
Shafts delivered with the machine	5 shafts + 1 scrolling bar
Adjustable speed	0,3 to 6,5 m/mn - 0,9 to 21 ft/mn
Power W / Voltage / Amps	3 600 W / 230 V / 50-60 Hz / 16 A
Dimensions of the machine (cm and inch)	W 206 x D 82 x H 153 (W 81" x D 32" x H 60")
Net weight of the machine	300 kg (660 lb)
Shipping dimensions (cm/inch)	W 215 x D 95 x H 170 / W 85" x D 38" x H 66"
Shipping weight	370 kg (815 lb)
Warranty	2 years
Made in France, CE certified, based on European Machines Directives and electromagnetic compatibility CEM & FCC	V

### QUALITY AND MASS PRODUCTION IN 1,08 M - 42 1/2"

- A laminator for multiple application with thermal and pressure sensitive adhesive films
- ─ Working width 108 cm (42 1/s")
- → Heated rollers from 20 to 140 °C 86 to 284 °F
- Nip roller opening up to 25 mm (1")
- Lamination speed up to 3 m/minute (10 ft/mn)
- Adjustable pressure level corresponding to the media processed
- Single side lamination, encapsulation with pressure sensitive adhesive in one pass, pre-mask, mounting up to 25 mm – 1" thick, use of polyester thermal film for encapsulation

### **→ INCLUDED**

### In line slitting

2 cutter blades integrated in the machine for slitting your works in line between the 2 sets of rollers while the lamination goes on.

### → OPTION

#### **Electrical rewinder**

Practicle for saving space, collecting and preserving work output. The laminated material gets rewound automatically on a core, waiting for the next finishing process.

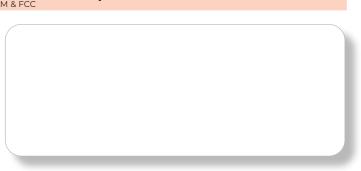

### → TECHNICAL DATA

Maximum thickness media + board	25 mm (1")
Maximum working width	108 cm (42 <sup>1/2</sup> ")
Maximum film width	110cm (43 <sup>1/3</sup> ")
Usable length of lamination media	50 / 100 m (max. diam. 23 cm/9")
Diameter of the roller	78 mm (3'')
Temperature of the heating roller	20 to 140 °C (68 to 284 °F) – different heat on the rollers
Heating time from room temperature to 100 °C - 212 °F	20 minutes
Shafts delivered with the machine	4 shafts
Adjustable speed	Up to 3 m/mn - 10 ft/mn
Power W / Voltage / Amps	3100 W - 230V - 14A - 50-60 Hz
Dimensions of the machine (cm and inch)	W 142 x D 76 x H 132 cm (W 56" x D 30" x H 52")
Net weight of the machine	185 kg (407 lb)
Shipping dimensions (cm/inch)	W 201 x D 73 x H 106 cm (W 80" x D 29" x H 42")
Shipping weight	250 kg (550 lb)
Warranty	2 years
Made in France, CE certified, based on European Machines Directives and electromagnetic compatibility CEM & FCC	V

## **SIROCCO 1080**

Low cost investment

Model illustrated: Sirocco 1080 with optional print rewinder

## A FIRST STEP IN PRINT FINISHING FOR NEW OR SKILLED OPERATORS, AT A LOW COST INVESTMENT

- —● Laminating width 108 cm 43" for semi-intensive and occasional use
- Entry level model, perfect for copy-shops, hyper markets or any integrated print-shop in a corporation
- Heating rollers adjustable from 40 to 160 °C 104 to 320 °F. Same heating on the top and bottom rollers
- Use of thermal polyester film up to 125  $\mu$  (5 mil) thickness
- Use of pressure-sensitive adhesive film for single side lamination or simultaneously with double side adhesive
- → Mounting up to 25 mm 1" thickness
- Pressure adjustable in accordance with the exact thickness of the material and not preset

## **SIROCCO 1080**

Use of pressure sensitive adhesive film on any type of media and prints

Use of thermal polyester film on paper printed with water based inks

A clear and easy to use control panel

In line slitting

2 cutter blades integrated in the machine for slitting your works in line between the 2 sets of rollers while the lamination goes on.

### - OPTION

#### **Electrical rewinder**

Practicle for saving space, collecting and preserving work output. The laminated material gets rewound automatically on a core, waiting for the next finishing process.

### **→ TECHNICAL DATA**

Maximum working width	108 cm (43")
Maximum film width	113 cm (45")
Usable length of lamination media	50 / 100 m (diam. max. 23 cm)
Diameter of the roller	54 mm – 2 1/8"
Temperature of the heating roller	40 to 160 °C ( 104 to 320 °F)
Heating time from room temperature to 100 °C - 212 °F	20 minutes
Shafts delivered with the machine	3
Adjustable speed	Up to 3 m/mn (10'/mn)
Power W	2800 W
Voltage	230 V / 50-60 Hz
Ampers	16 A/230 V
Dimensions of the machine (cm and inches)	W 142 x D 76 x H 126 (L 56" x P 30" x H 50")
Net weight of the machine	160 kg (353 lb)
Shipping dimensions (cm)	L 180 x P 105 x H 100
Shipping dimensions (inch)	L 71" x P 42" x H 40"
Shipping weight	209 kg (460 lb)
Warranty	2 years
